

NEW WORLD OF LEARNING

The 'New World of Learning' is our observation on the changing **social**, **educational**, and **technological** contexts of education.

Our marketing and design teams review and update these trends every year to make sure we are up to date on the latest movements in the educational sphere.

Three Drivers of Change

Social

As society changes, so do people. The school has become a meeting place, a place of social integration and transfer of information for both children and their parents.

1. Learning Happens in Communities
2. Learning is Lifelong
3. Movement Matters
4. Our Resources are Finite

Educational

Education needs to be more flexible and holistic. We are switching from a more fact-based knowledge economy to one driven by experience and an all-inclusive learning approach. This allows learners to take a more organic approach to learning.

5. Learning is Experiential
6. We Engage Differently
7. We Learn as a Group
8. Assessment is Essential

Technological

Technology is rapidly shifting the way educational leaders, instructors, and students approach the learning process; enabling both individualized as well as differentiated experiences for each learner.

9. Technology Rich Environments
10. Technology Expands Involvement
11. User Interface Design
12. Technology is Individualized
